

CHAPTER ONE

INTRODUCTION

1.1 Scope of the Report

This report covers the six-month Student Industrial Work Experience Scheme (SIWES) undertaken at Ogba Care Pharmacy, located at No. 270 Sapele-Warri Road, Sapele, Delta State. The training spanned from April 2025 to September 2025. The report provides a detailed account of the activities carried out during the industrial training, the knowledge and skills acquired, as well as the relationship between classroom learning and practical pharmaceutical operations.

1.2 Aim of the Report

The primary aim of this report is to document the experience and practical exposure gained during the industrial training at Ogba Care Pharmacy. It also aims to highlight how the program has enhanced my understanding of pharmacological applications in community pharmacy practice and prepared me for future professional responsibilities in the healthcare sector.

1.3 Brief Description of the Company

Ogba Care Pharmacy is a premier, privately-owned community pharmacy located at No. 270 Sapele-Warri Road, Sapele, Delta State. The pharmacy operates under the leadership and supervision of Pharmacist Jerry Ogba, the head pharmacist.

The establishment is dedicated to providing quality pharmaceutical care and health-related services to the community. Its operations combine both traditional dispensing and modern clinical services aimed at improving patient outcomes. Some of the key services provided by Ogba Care Pharmacy include: Expert pharmaceutical care and medication counseling, provision of curated prescription medicines, over-the-counter products, and wellness supplements, diagnostic services and medical equipment supply and sale of premium body care and cosmetic products.

1.4 Relevance of Work Experience to Career Objective

As a Pharmacology student, undergoing industrial training at a community pharmacy offered valuable practical exposure to the therapeutic, administrative, and patient-care aspects of pharmaceutical practice.

The experience bridged the gap between theoretical classroom learning and real-life drug application. I developed competencies in patient communication, drug dispensing, dosage calculations, and pharmacovigilance — all of which align closely with my career goal of becoming a pharmacology professional with hands-on expertise in drug safety, efficacy, and healthcare delivery.

1.5 Organisational Structure and Operations

Ogba Care Pharmacy is structured into three main units, each contributing to the overall efficiency and success of the organization:

1.5.1 Administrative Unit

Function: Oversees consultation logistics and business operations.

Activities: Inventory management, ordering supplies, supplier and insurance correspondence, accounting, and other managerial tasks. It also houses the poison cupboard for controlled medications.

1.5.2 Patient Care Unit

Function:: Provides enhanced patient-centered services beyond routine dispensing.

Activities: Vaccinations, Blood Pressure Monitoring, Blood Glucose Testing, Medication Therapy Management (MTM) reviews, Simple first aid and minor health interventions

1.5.3 Dispensing Unit

Function: This is the core of the pharmacy, where direct interaction with patients occurs.

Activities: Receiving prescriptions, data entry, pharmacist verification, labeling, dispensing of medications, patient counseling, and sales of over-the-counter (OTC) products.

The dispensing counter is equipped with a computer system, prescription files, and medication shelves arranged for efficiency and easy access. During my SIWES training, I worked across all three units, which provided me with broad exposure to the operational flow of a community pharmacy and deepened my understanding of how each unit contributes to the organization's success.

1.6 ORIENTATION AT OGBA CARE PHARMACY

Orientation is a normal exercise conducted for every new employee of the pharmacy. On my first day at Ogba Care Pharmacy, I received an orientation from the Head Pharmacist, who explained in detail all the services rendered by the pharmacy, the order of hierarchy, and everything I needed to know about the pharmacy. He also outlined the rules and regulations governing staff conduct. Afterwards, he took me on a tour of the pharmacy and introduced me to some of the staff members present on that day, both senior and junior. He further showed me the various sections of the pharmacy and described their specific functions. After the orientation, I was asked to observe the routine day-to-day operations of the pharmacy for the remainder of the day.
